Title

Culturable diversity of heterotrophic bacteria in Kongsfjord

Science Keywords

Category	Biosphere
Topic	Aquatic Ecosystems
Expedition Year	2009-2010
ISO Topic	Oceanography

Summary

Abstract

This data is on the characteristics and identity of the heterotrophic bacteria encountered in the water and sediment samples of Kongsfjord

Purpose

One objective was to look at the changes in the microbial communities as a function of climate change and other is to identify their role in nutrient cycling especially phosphorus.
